

# THE CREEK 4240

## AN INTEGRATED AMPLIFIER

THE MODEL 4240  
A NEW INTEGRATED  
AMPLIFIER THAT  
CHALLENGES THE BEST  
SEPARATE COMPONENTS

**T**he Creek 4240 is an Integrated Amplifier of the highest caliber, designed and manufactured in the UK. The 4240 employs exclusive and novel circuit techniques belied by its elegantly simple appearance. The 4240 is the new benchmark for integrated amplifier sound and value.

With the 4240, Creek engineers used CAD (Computer Aided Design) to update the classic Creek 4040 and 4140. You have complete control of your system through four line inputs plus a tape loop. A high quality Creek phono stage (MM or MC) is an optional add-on for playback of conventional records.

External connections for access to the preamp or power amp stages provide unique possibilities. You can bi-amp your speakers

by adding the matching Creek A42 power amp. Two pairs of 4mm speaker sockets provide switched output when headphones are used, or direct output. Jointly, the double connections make bi-wiring extremely convenient.

The superior sound quality of the 4240 comes from numerous design techniques including DC coupling of its preamp and power amp. This is achieved by removing all sound degrading capacitors from the signal path and using advanced DC servo circuitry. MOS-FET driver and output power transistors insure a high level of performance and reliability not found at this price.

With the 4240, Creek continues to prove that accurate, full-bodied sound can be truly affordable.
